

Knowledge transfer plus

The complete solution for knowledge transfer within your company

Are you looking to produce high-quality e-learning and interactive IT-simulations at the touch of a button? Do you want your staff to be able to securely and safely navigate business applications? The tt performance suite brings together web-based training, documentation, online training, online help and performance support in a unique way and as such, it is excellent for documenting your new software.

tt Knowledge force

The learning content management system

With tt knowledge force, your authors are able to simply produce professional and standardised learning content and documentation in a playful way. As such, it does not matter whether content is created for IT applications or for topics not related to IT, such as soft skills or compliance.

In the IT environment, documentation is created by making notes – e.g. for applications for ERP systems, office or CRM software. Simple note making is enough in order to create the different learning media. Whilst your experts carry out a certain process, tt knowledge force generates different content formats during the recording, automatically and simultaneously. This way, the content can be called up immediately in various formats as web-based training, IT documentation or as a step by step list. At the same time, you have various output formats available such as Word, PDF or HTML. Of course, the documents will be presented in the corporate design of your company without the need for further intermediate steps. Through this, the time your experts take in creating learning content is also minimised. A key advantage for international operating companies: The automatic re-recording function supports the translation into other languages.

Highlights

- A reduction in costs and less work
- Increased understanding in terms of processes and simplified changes
- Scalability without problems as a result of the client-server principle
- IT documentation, independent of the software
- Reduction in errors and an increase in efficiency
- Concentration on the core tasks
- Reduction in the time it takes to look for knowledge and a reduction in the ti
- Minimising the loss of expert knowledge and risks associated with the roll out

But what should you do if you want create training that doesn't not have anything to do with IT? It isn't a problem at all. As a professional author software, tt knowledge force also provides support in creating web-based training with different content.

tt guide

Knowledge: Simply made available

With tt guide, you make information and learning content available to staff directly in the workplace. tt guide becomes a valuable support, especially in the case of new, complex, seldom-used or mutated work processes.

Of course, third party documents without any relation to IT can be uploaded and administered. These can be simply and easily found with the help of the tt guide's 'suggestion search' and as such, they make the everyday work of your staff easier. Via the performance support categories, you can also group according to content aspects and make it available.

A summary of the tt performance suite
